## **1. Introduction**

### ***1.1 The need for a Global Map***

Since the 1972 United Nations Human Environment Conference, people around the world have realised that solving global environmental problems must be done at a global scale through communication and collaboration. One principle declared at this conference was that, "International matters concerning the protection and improvement of the environment should be handled in a cooperative spirit by all countries, big and small, on an equal footing. Cooperation through multilateral or bilateral arrangements or other appropriate means is essential to effectively control, prevent, reduce and eliminate adverse environmental effects resulting from activities conducted in all spheres."

For this reason, international organizations and institutions provide and share map information about the changing state of the planet. The Agenda 21 plan resulting from 1992's Earth Summit (the United Nations Conference on Environment and Development held in Rio de Janeiro in June 1992) addressed the need for improved accessibility, quality, standardization, and availability of geographic information between nations. National and international organizations were urged to strengthen their mechanisms of information processing and exchange in order to, "Ensure effective and equitable availability of information," throughout the world.

This was reinforced by the Special Session of the United Nation General Assembly on the implementation of Agenda 21 held five years later. One resolution stated that, "A supportive environment needs to be established to enhance national capacities and capabilities for information collection, processing and dissemination, especially in developing countries, to facilitate public access to information on global environmental issues through appropriate means, including...global mapping."

"Initiatives and partnerships for global mapping," were strongly encouraged in the Johannesburg Plan of Implementation following the World Summit on Sustainable Development in 2002. The Global Map project was subsequently registered as an initiative following this summit with the goal of completing global coverage by the year 2007.

Clearly, it is essential that the citizens, researchers, and decision makers of the world have access to accurate, authoritative and up-to-date maps of fundamental environmental features if they are to fully understand and appreciate their shared global environment. Without the Global Map, reliable cartographic data and information of the entire world would remain difficult to find, get, and use. Participating national mapping organizations are urged to, "Foster the use of Global Map and identify the needs for basic geographic data and reflect these needs in new specifications."

This document contains the latest Global Map Specifications.

### ***1.2 Purpose and intended use of the Global Map***

The concept of Global Mapping and the establishment of an international body for Global Mapping were first proposed by the Ministry of Construction of Japan in 1992.

In 1994, Geographical Survey Institute of Japan (GSI) proposed the first draft set of technical specifications. The Global Map project has grown significantly to involve the participation of many interested nations.

The main objective of this global project is to bring all nations and concerned organizations together to collaboratively develop and provide easy and open access to worldwide geographic information at a scale of 1:1,000,000. The use of these data will facilitate the implementation of global agreements and conventions for environmental protections; will support the monitoring of major environmental phenomena; and will encourage economic growth within the context of sustainable development. As part of this objective, Global Map products will be developed to this specification.

## **2. General Information**

### **2.1 Product extents**

The Global Map product will encompass the entire globe, at a scale of 1:1 million. All the data sets will be consistent with this scale and these specifications.

### **2.2 Reference coordinate system**

The ITRF94 coordinate system will be adopted as the reference coordinate system. GRS80 ellipsoid will be adopted to represent the position of spatial objects in longitude and latitude. As the difference between these coordinates and WGS84 coordinates is negligible at the scale of this product, data in WGS84 will be taken to be in ITRF94.

### **2.3 Precision**

A pair of longitude and latitude values describes the position of spatial objects. The data shall be stored in decimal degrees to a minimum of three decimal points as geographic coordinates with southern and western hemispheres having a negative sign for latitude and longitude, respectively.

Resolution of vertical values is 1 metre.

### **2.4 Accuracy**

The positional accuracy of spatial data is the degree to which planimetric coordinates and elevations of features agree with their real world values. The planimetric accuracy will be composed of errors from three sources:

- The positional accuracy of the source material
- Errors due to conversion processes.
- Errors due to the manipulation processes.

Absolute horizontal and vertical accuracy will vary by location according to the source data. Absolute accuracy is defined as the difference between the stored coordinates and the true coordinates for a specific point.

For horizontal accuracy, 90% of points will be within  $\pm 2\text{km}$  of their actual location. In the case of data obtained from satellite images, the maximum error is less than or equal to 0.5km.

Vertical accuracy is notionally  $\pm 150$  metres for 90% of points. This figure may need to be reviewed once the data are available, as sources to this accuracy may not be available in areas of high relief.

## 2.5 Series of Global Map

There are two series of Global Map. One is National and Regional version which each participating NMOs are basically in charge of development of their own Global Map. The other is Global Version which is developed by using satellite imagery with cooperation between participating NMOs and supporting stakeholders. (Global version covers only in vegetation layer and land cover layer.)

## 2.6 Relationship to other international efforts, specifications, and standards

The Global Map directly contributes to the development of a global Spatial Data Infrastructure. Formal relationships exist between the ISCGM and the GSDI, the GEOSS, and the One Geology initiatives. Global Map specifications have been written to comply with international standardization agreements, specifically the International Organization for Standardization (ISO) TC 211 recommendations for geographic data.

## 3. Data Model

Spatial features are organised into thematic layers, with each layer containing logically related geographic information. These layers will either be in vector or raster form.

### 3.1 Vector Data

#### 3.1.1 Representation of features and layers

The layers in vector representation will include all those layers other than elevation, vegetation, land cover and land use. The features of the vector data model will be comprised of three spatial objects: points, edges and faces. (Formal ISO/TC211 terminology for these can be found in Appendix B.) Vector layers and the associated feature types are shown in the following table.

Layer	Feature name	Feature type	Inclusion	Abbreviation
<b>Transportation</b>	Airport	point	optional	airp
	Railroad Station	point	optional	rstatp
	Port	point	optional	portp
	Railroad	edge	mandatory	rail
	Road	edge	mandatory	roadl
	Trails and Tracks Line	edge	mandatory	trail
	Ferry route	edge	optional	ferryl
<b>Boundaries</b>	Political Boundary	point	mandatory	polbndp
	Coast Line	edge	mandatory	coastl
	Political Boundary Line	edge	mandatory	polbndl
	Political Boundary Area	face	mandatory	polbnda
<b>Drainage (Hydrography)</b>	Miscellaneous (Dam/Weir/Island/Spring /Water-Hole)	point	optional	miscp
	Miscellaneous (Dam/Weir)	edge	optional	miscl

Layer	Feature name	Feature type	Inclusion	Abbreviation
	Aqueduct/Canal/Flume/Penstock	edge	optional	aquel
	Water Course	edge	mandatory	riverl
	Inland Water	face	mandatory	inwatera
<b>Population Centres</b>	Built-up Area	point	optional	builtupp
	Built-up Area	face	optional	builtupa

\* The last character of abbreviation indicates primitive type (p: point, l: line, a: area).

**Fig. 1 Vector layers and associated feature types**

Note: Mandatory layers will only be populated where the features are present and are significant at the scale of the data.

International boundaries for the Global Map will be as defined by nations supplying data. Where adjoining nations supply different representations of the border both will be included in the product. All data will be identified as to its origin (see Appendix D).

### 3.1.2 Topology

Vector data in the Global Map will be partially topologically structured. Features stored as edges and faces will be individually structured.

Topology will be retained across the tile boundaries. Real world phenomena that cross the tile edge will have exactly the same coordinates on the nodes on the tile edge on each tile. This will enable the database to function as a seamless unit for analysis purposes. For example, in the diagram below, the road edge in both tiles will be matched at the edge of both tiles.

**Fig. 2 Topology across the tile edge**

### 3.1.3 Data quality

- Logical consistency will be kept.
- Features will not be duplicated or omitted where they meet the selection criteria.
- Metadata will document the data's quality (see section 5 Metadata).

## 3.2 Raster Data

### 3.2.1 Representation of features and layers

Raster grid cells will be arrayed on a horizontal coordinate system in degrees of latitude and longitude referenced to ITRF94 and GRS80. Small islands less than approximately 1 square kilometre may not be represented.

The following groups of features are stored as raster layers:

**ELEVATION:** The vertical distance between the surface of the earth and the standard sea level that the nation has defined. Vertical units represent elevation in meters above Mean Sea Level (MSL).

**VEGETATION:** Percent tree cover data by an integer value from 0 to 100 will be used as vegetation layer.

**LAND COVER:** GLCNMO global legend (APPENDIX D Table 2) will be used for land cover layer.

**LAND USE:** Codes developed for the Global Map (APPENDIX D Table 2) will be adopted.

### 3.2.2 Data structure

Cell size for raster data will be 30 arc-seconds by 30 arc-seconds. With the origin being the NW corner of the tile.

### 3.2.3 Determination of cell's attributes

A cell's attribute value represents a characteristic that is dominant near the centre position of the cell.

### 3.2.4 Header file

A header file will accompany each raster file. Items to be included in the header file are as follows. One of the figures in parentheses is chosen if there are any. Data will meet the default values where specified in parentheses and italicised.

<b>BYTEORDER</b>	Byte order in which image pixel values are stored. Big endian ( <i>M</i> ).
<b>LAYOUT</b>	organisation of the bands in the file ( <i>BIL = band interleaved by line</i> ) ( <i>note: all files are single band images</i> )
<b>NROWS</b>	Number of rows (cells) in longitude direction of the image
<b>NCOLS</b>	Number of columns (cells) in latitude direction of the image
<b>NBANDS</b>	Number of spectral bands in the image ( <i>1</i> )
<b>NBITS</b>	Number of bits per cell ( <i>8 for land cover, land use and vegetation layers and 16 for elevation</i> )
<b>BANDROWBYTES</b>	Number of bytes of data per row
<b>TOTALROWBYTES</b>	Total number of bytes of data per row
<b>BANDGAPBYTES</b>	The number of bytes between bands in a BSQ format image ( <i>0</i> )
<b>NODATA</b>	Value used for masking purposes ( <i>For the higher, 9998 for elevation, 255 for vegetation, land cover, and land use. For the sea -9999 for elevation, 0 for vegetation, land cover, and land use.</i> )
<b>ULXMAP</b>	Longitude of the centre of the upper-left pixel

**ULYMAP** Latitude of the centre of the upper-left pixel

**XDIM** Width of a cell in longitude direction

**YDIM** Width of a cell in latitude direction

A sample raster header file is at Appendix F.

### **3.2.5 Attributes description**

The attribute for a raster file is the value of each of the cells, as referred to in the data dictionary.

## **3.3 Attributes**

An attribute is a particular property of a feature.

The non-locational information about a feature instance will be stored as attributes. Attributes are classified into two groups: mandatory attributes and optional attributes. Names should be stored in roman characters without diacritical marks. Attributes other than names will be stored in English characters.

## **3.4 Data Dictionary**

The data dictionary is included as Appendix D. The table lists vector and raster feature types and their attributes.

Vector features will be selected on the basis of their suitability for 1:1 million scale mapping and the feature definitions. As a result some feature types will only occur in the less densely settled areas where they are relatively more important than in the more densely settled areas. For example, Trails will be shown where there is not a well developed road network.

## **4. Output formats**

For interoperability of Global Map uses, user friendly formats are defined independently with the official formats.

### **4.1 File format**

#### **4.1.1 Vector**

GML 3.2.1, standardized in ISO19136, has replaced VPF as the official distribution format. This format provides a standard format for transferring digital geographic data. (Details are shown in Appendix H.)

#### **4.1.2 Raster**

BIL (Band Interleaved by Line) format; a simple binary raster format without embedded header will be adopted as the official distribution format. This type of data stores pixel information band by band for each line, or row, of the image. For example, given a one-band image such as the ones for Global Map, data is written for row 1, data is written for row 2, and so on, until the total number of rows in the image is reached. Vegetation,

Land Cover and Land Use layers will be 8-bit unsigned data and the elevation data will be 16-bit signed.

A header file will accompany each raster file.

The data are stored in row major order (all the data for row 1, followed by all the data for row 2. etc.).

The elevation data are in big-endian byte order, that is, the most significant byte is stored first.

## **4.2 Area of file coverage (tiling)**

### **4.2.1 Vector**

Where a Nations territory is less than 3,000,000 square km the data are delivered as one separate file for each feature class.

For those Nations with territory spanning greater than 3,000,000 square km the data will be divided into tiles. Files should be adjusted so that extreme differences in size do not occur.

### **4.2.2 Raster**

Whole national territory is basically defined as one file coverage,

The tiling of Global version series (referred to 2.5) is to be divided by the tiles of 30 deg x 30 deg which starts from the equator and the Greenwich meridian.

## **4.3 File names**

### **4.3.1 Vector**

Vector data have a file name of the form `www_xxx_y.zzz` where `www` identifies the abbreviation of the feature shown in fig.1, `xxx` identifies the country code which is defined at three-character ISO 3166 Nation Code, `y` shows the Unique ID (refer to 4.2) if a territory is divided, `zzz` is the extension identifying the data (gml). In the case that a nation territory is less than 3,000,000 square km and not needed to be tiling, the data have a file name of `www_xxx.zzz`

Example of file name

`coastl_ind_2.gml`: Coastline of Global Map India in gml format in the case of tiling

`coastl_jpn.gml`: Coastline of Global Map Japan in gml format in the case of no tiling

## 4.3.2 Raster

### 4.3.2.1 National and Regional version

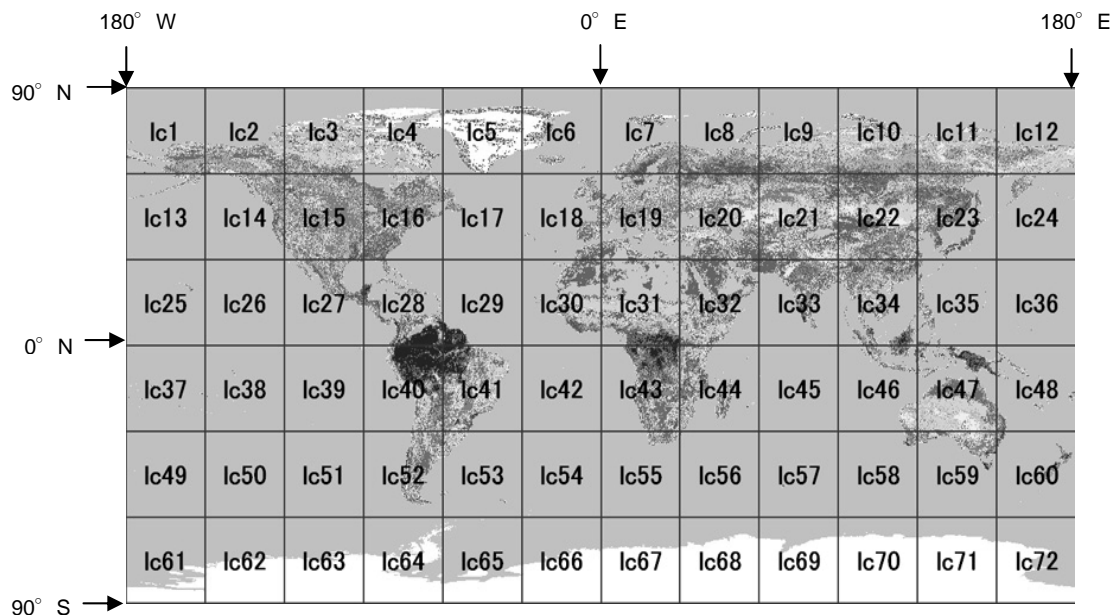

National and Regional version of Raster data have a file name of the form `ww_xxx.zzz` where `ww` identifies the theme, `xxx` identifies the country code which is defined at three-character ISO 3166 Nation Code, and `zzz` is the extension identifying the data (`bil`) or the header (`hdr`).

Identifier	Theme
el	elevation
ve	vegetation
lc	land cover
lu	land use

**Fig. 3 Theme identifiers for raster**

### 4.3.2.2 Global version

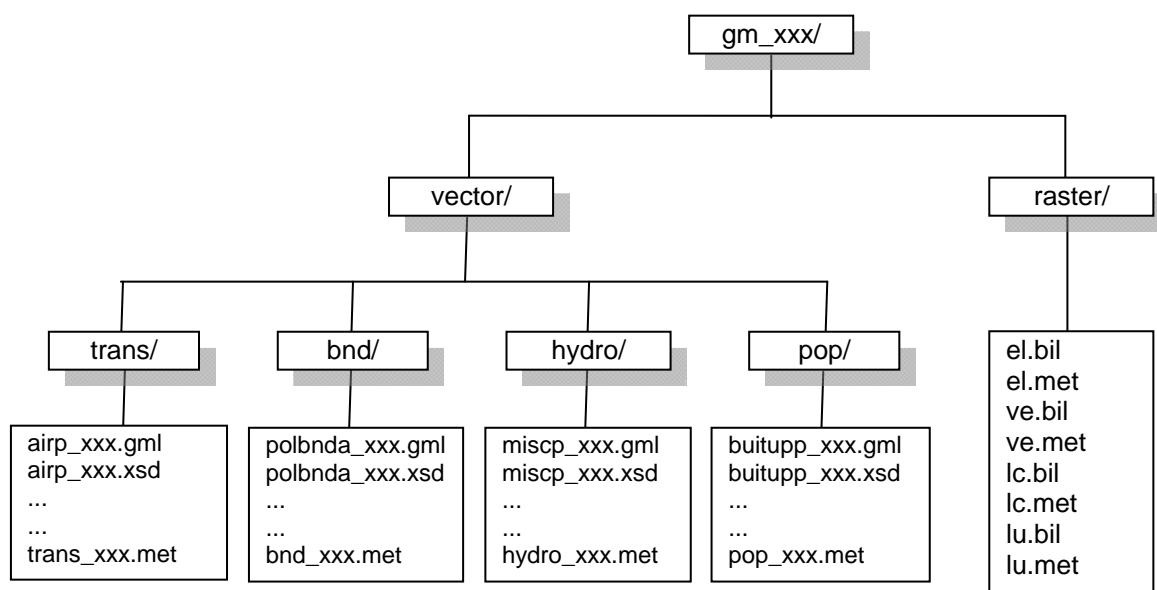

Global version of Raster data have a file name of the form `wwyy.zzz` where `ww` identifies the theme, and `yy` identifies the file number as shown in the following Fig.4, and `zzz` is the extension identifying the data (`bil`) or the header (`hdr`)

**Fig.4 Tiling of Global version (ex. land cover)**

## 4.4 Directory Structure

Each database directory such as `gm_xxx` will contain a national or a regional dataset. The directory structure is as follows.

**Fig. 5 Directory structure (ex. accompanying a metadata file in each layer)**

## 5. Metadata

Metadata is data about the contents, quality, condition and other characteristics of the data. It also describes the lineage, process and accuracy of the dataset. Metadata for Global Map follows the Global Map metadata profile based on the ISO19115 core metadata elements and other essential elements for Global Map. Encoding methods follow ISO19139.

### 5.1 Metadata file

A metadata file accompanies each layer or feature. This file will be a XML file with utf8. Metadata have a file name of the form `www_XXX.zzz` where `www` identifies the abbreviation of the layer name or feature name shown table, `XXX` identifies the country code which is defined at three-character ISO 3166 Nation Code and `zzz` is the extension 'met'.

Example of file name (metadata)

`trans_ind.met`: name of the metadata file for transportation layer of Global Map India

`airp_jpn.met`: name of the metadata file for airport feature of Global Map Japan

### 5.2 Contents

The contents of metadata follow the ISO standard of metadata (ISO 19115). Metadata will be described in English. Metadata will be supplied separately for each layer in the dataset. For details, please refer to Appendix G.

## 6. Suggestions for change

Suggestions for changes or corrections to these Specifications should be referred to the Secretariat of ISCGM ([sec@iscgm.org](mailto:sec@iscgm.org)) or:

Secretariat of ISCGM  
Geographical Survey Institute  
Kitasato 1, Tsukuba, Ibaraki, 305-0811 JAPAN

## 7. Data Sources

When the Global Mapping project started, existing data was utilized as an initial Global Map data as follows.

**Global 30 Arc Second Elevation Data Set (GTOPO30)** (US Geol. Survey, EROS Data Centre)

*Elevation (DEM)*

**Global Land Cover Characteristics Database** (US Geol. Survey, U. of Nebraska-Lincoln, EC Joint Research Centre).

*Land Cover*

*Land Use*

*Vegetation*

**VMAP Level 0** (NGA)

*Drainage System (rivers, streams, lakes)*

*Transportation (roads, railways, airports)*

*Political Boundaries (including coastlines)*

*Populated Places*

## 8. References

## APPENDIX A Update History of the Specifications

Discussions on the specifications of Global Map were started at ISCGM3 in Gifu, Japan on November 12-14, 1997 through discussions and subsequent adoption of provisional technical specifications. The discussions were thereafter continued at WG2 on Specifications. The specifications have been revised in contents as follows:

- Ver. 1.0: Adopted at ISCGM5 in Canberra, Australia on November 20, 1998.
- Ver. 1.1: Adopted at ISCGM7 in Cape Town, South Africa on March 16, 2000.  
Text representation was amended.
- Ver. 1.2: Adopted at ISCGM12 in Cairo, Egypt on April 17, 2005.  
A condition to express names thoroughly in upper case characters was modified so that the Secretariat can more smoothly process the data to upload them on the Web site. On the expression of a river mouth, it was decided to draw a temporary line on the border of river and sea.
- Ver. 1.2.1: Adopted at ISCGM13 in Santiago, Chile on November 11, 2006.  
Small correction on the description of meta data (See Annex C) and correction on the expression of data dictionary were made.
- Ver. 1.3: Adopted at ISCGM14 in Cambridge, U. K. on July 14, 2007  
Items on the data development and provision in tiling of the global coverage of "Land Cover data (GLCNMO)" and "Percent Tree Cover data" in Raster layers and description method of the header file, terminology and Data Dictionary were added.
- Ver. 2: Adopted at ISCGM16 in Bangkok, Thailand on October 25, 2009.  
The specifications were totally revised based on the opinions from participating organization. The main points of this revision are as follows:
- Rearrangement of chapters and articles
  - Addition and deletion of features and attributes and attribute values in Vector layers
  - Change of official format in vector data from VPF to GML 3.2.1 standardized in ISO19136
  - Adoption of Metadata based on ISO19115
  - Change of the tiling method
  - Addition of "Update History of Specifications" as Appendixes
  - Some corrections on the description associated with points shown above and others

## APPENDIX B Glossary of terms

Terminology definitions according to ISO/TC211 (Source: ISO/TC211 Terminology web page; URL: <http://www.isotc211.org/> dated 19th August 2008, except for “Attribute” and “Percent tree cover”)

### ***Accuracy***

Closeness of agreement between a test result and the accepted reference value.

### ***Altitude***

Distance of a point from a chosen reference surface along a line perpendicular to that surface.

### ***Attribute***

A property which describes a geometrical, topological, thematic, or other characteristic of an entity.

*[ISO/TC 211 N 279, Geospatial services - Portrayal of Geographic Information; WG 4*

*Date of source document: 1996-10-23*

*Term status: comments given in ISO/TC 211/WG 1/PT 04 N 015*

*Document status: Working Draft]*

### ***Boundary***

Set that represents the limit of an entity.

### ***Code***

Representation of a label according to a specified scheme.

### ***Connected node***

Node that starts or ends one or more edges.

### ***Coordinate***

One of a sequence of n numbers designating the position of a point in n-dimensional space.

### ***Curve***

1-dimensional geometric primitive, representing the continuous image of a line.

### ***Data***

Reinterpretable representation of information in a formalised manner suitable for communication, interpretation, or processing.

### ***Data element***

Unit of data that, in a certain context, is considered indivisible.

### ***Dataset***

Identifiable collection of data.

### ***Edge***

1-dimensional topological primitive.

**Face**

2-dimensional topological primitive.

**Feature**

Abstraction of real world phenomena.

**Feature attribute**

Characteristic of a feature.

**Geographic data**

Data with implicit or explicit reference to a location relative to the Earth.

**Grid**

Network composed of two or more sets of curves in which the members of each set intersect the members of the other sets in an algorithmic way.

**Metadata**

Data about data

NOTE — Metadata for geographic data typically provides information about its identification, extent, quality, spatial and temporal schema, spatial reference, metadata and distribution.

**Metadata element**

Discrete unit of metadata.

**Model**

Abstraction of some aspects of reality.

**Node**

0-dimensional topological primitive.

**Percent tree cover**

A percentage of the area covered by a vertical projection of the canopy of the tree within a unit mapping area or a pixel.

**Point**

0-dimensional geometric primitive, representing a position.

**Quality**

Totality of characteristics of a product that bear on its ability to satisfy stated and implied needs.

**Raster**

Usually rectangular pattern of parallel scanning lines forming or corresponding to the display on a cathode ray tube.

***Schema***

Formal description of a model.

***Spatial object***

Object used for representing a spatial characteristic of a feature.

***Surface***

2-dimensional geometric primitive, locally representing a continuous image of a region of a plane.

***Vector***

Quantity having direction as well as magnitude.

## **APPENDIX C Acronyms and Abbreviations**

BIL	Byte Interleaved by Line
BSQ	Band Sequential
DEM	Digital Elevation Model
DIGEST	Digital Geographic Information Exchange Standard
GLCNMO	Global Land Cover by NMO
GML	Geography Markup Language
GRS80	Geodetic Reference System 1980
GTOPO30	Global digital elevation model (DEM) with a horizontal grid spacing of 30 arc seconds.
ISCGM	International Steering Committee for Global Mapping
ISO	International Organization for Standardization
ITRF94	International Terrestrial Reference Frame 1994
MSL	Mean Sea Level
VMAP0	Vector Smart Map Level 0
VPF	Vector Product Format
WG	Working Group
WGS84	World Geodetic System 84
XML	Extensible Markup Language

## APPENDIX D Global Map Data Dictionary

**Table 1 Vector data**

Optional features are put in parentheses in italics such as (*Airport*).

The attribute named 'soc' will identify the source country for the data. Values will be the country code of the country supplying the data (see Appendix E). The additional value 'vma' will indicate data that has been taken unchanged from the Vmap level 0 product.

Definitions in this dictionary are based on DIGEST Edition 2.1 September 2000 as reference.

Field size of \* is a variable length field and may be of any length.

Layer	Feature Name	Abbreviation	Definition	Feature type	Attributes	Field name	Field type	Field size (bytes)	Value type/codes	Value Description or Example
Transportation	<i>(Airport)</i>	airp	A defined area used for landing, take-off and movement of aircraft including associated buildings and facilities.	point	FACC feature code	f_code	Character text string	5	GB005	
					ICAO designator	iko	Character text string	4	UNK Actual value	if not applicable eg FAJS
					IATA designator	ita	Character text string	3	UNK Actual value	if not applicable eg NRT
					Name	nam	Character text string	*	UNK Actual value	Unknown eg JOHANNESBURG INTERNATIONAL
					Usage	use	Number (short integer)	2	0 4 8 22 23 999	Unknown National (Domestic) Military/Defence Joint Military/Defence/ Civilian International Other
					Airfield/Aerodrome elevation	zv3	Number (short integer)	2	-99999999 -500 to 9999	Unknown Elevation in metres

Global Map Specifications

Layer	Feature Name	Abbreviation	Definition	Feature type	Attributes	Field name	Field type	Field size (bytes)	Value type/codes	Value Description or Example
					Source country or VMA	soc	Character text string	3	Country code vma	See Appendix E for country codes list (eg USA) Vmap level 0
	(Railroad Station)	rstatp	A stopping place for the transfer of passengers and/or freight.	point	FACC feature code	f_code	Character text string	5	AQ125	
					Name	nam	Character text string	*	UNK Actual value	Unknown eg Tokyo
					Source country or VMA	soc	Character text string	3	Country code vma	See Appendix E for country codes list (eg USA) Vmap level 0
	Railroad	raill	A rail or set of parallel rails on which a train or tram runs.	edge	FACC feature code	f_code	Character text string	5	AN010	
					Existence category	exs	Number (short integer)	2	2 5 28 55 59	Doubtful Under construction Operational Unexamined/Unsurveyed Not useable
					Feature configuration	fco	Number (short integer)	2	0 2 3	Unknown Multiple Single
					Location	loc	Number (short integer)	2	0 4  8 25 999	Unknown Below surface/ Submerged underground On ground surface Suspended or elevated above ground or water surface Other
					Source country or VMA	soc	Character text string	3	Country code vma	See Appendix E for country codes list (eg USA ) Vmap level 0
	Road	roadl	An open way maintained for vehicular use.	edge	FACC feature code	f_code	Character text string	5	AP030	

Global Map Specifications

Layer	Feature Name	Abbreviation	Definition	Feature type	Attributes	Field name	Field type	Field size (bytes)	Value type/codes	Value Description or Example
					Accuracy category	acc	Number (short integer)	2	1 2	Accurate Approximate
					Existence category	exs	Number (short integer)	2	2 5 28 55	Doubtful Under construction Operational Unexamined/Unsurveyed
					Surface	rst	Number (short integer)	2	0 1 2	Unknown Paved Not paved
					Median category	med	Number (short integer)	2	0 1 2	Unknown With median Without median
					Route intended use	rtt	Number (short integer)	2	0 14 15 16 999	Unknown Primary route Secondary route Highway Other
					Seasonal availability	rsu	Number (short integer)	2	0 1 2	Unknown All year Seasonal
					Location	loc	Number (short integer)	2	0 4  8 25  999	Unknown Below surface / Submerged underground  On ground surface Suspended or elevated above ground or water surface Other

*Global Map Specifications*

			255	no data
<b>Land Use</b>	Global Map land use classification	cell	10	Forest: Area dominated by trees higher than shrubs with a canopy cover greater than or equal to 10 percent.
			20	Mixture: Area where more than two classes are mixed including Non-vegetated area, Agricultural area, Grassland/Shrub and Wetland. This class is not applied where one class dominates.
			30	Grassland/shrub: Area covered by trees with canopy cover less than 10percent.
			40	Agricultural area: Area where agricultural activities are implemented constantly.
			50	Wetland: Area where underground water level is near the ground surface, or area with humid soil.
			60	Barren area: Non-vegetated area where no artificial structures exist.
			70	Built-up area: Area where artificial structures occupy significant surfaces.
			80	Drainage/water: Area inside coastline forming water surface.
			90	Ocean: Area outside coastline forming water surface.
			255	no data

“GLCNMO land cover classification” in the above table is used for global or continental land cover products. LCC code and LCC formula in the Value Meaning column is the land cover definition by Land Cover Classification System version 2 (LCCS2) developed by FAO ( <http://www.glcn-lccs.org/>). “/” in LCC code and LCC formula means “or”.

**(Informative) Table 3 Raster data (Former Global Map Specifications before version 1.2.1)**

The definitions and classifications of vegetation and land cover data were revised in Specifications version 1.3. On the other hand, vegetation and land cover data based on former Specifications are released from ISCGM website together with some national websites. The former specifications about vegetation and land cover data are shown below for reference.

Layer	Definition	Feature Class	Value	Value Meaning
Vegetation	Global Map Vegetation Classification (Modified Walter)	cell	10	Tropical rainforest: <i>Evergreen forest which has high rainfall and high humidity throughout the year. This class has an upper canopy formed by trees from 30 to 40m tall and may have occasional emerging trees taller than the upper canopy.</i>
			20	Hydrotropic forest: <i>Deciduous broad-leaved trees which are defoliated in dry season and foliate in rainy season.</i>
			30	Grassland in tropical or sub-tropical zone: <i>Grassland which has a long dry season and is heavily dried. Trees are only sparsely distributed. Plant density depends on dryness.</i>
			40	Semi desert in tropical or sub-tropical zone: <i>Plants are sparsely distributed in the area which has a little rainfall and is heavily dried</i>
			50	Desert in tropical or sub-tropical zone: <i>Plants are very sparsely distributed in the area which has a little rainfall and is extremely dried.</i>
			60	Evergreen thick-leaved forest: <i>Forest which has high rainfall in the rainy season and is relatively dried in summer. Trees which have evergreen thick and hard leaves dominate this forest.</i>
			70	Evergreen broad-leaved forest: <i>Forest in the warm temperate zone which has high rainfall in summer, or is humid throughout the year. Broad-leaved trees which have a little larger leaves than evergreen thick-leaved trees are the main component of this forest.</i>
			80	Deciduous broad-leaved forest: <i>Forest which mainly consists of trees defoliated in winter. This forest appears in the area which has sufficient rainfall in cool temperate zone.</i>
			90	Grassland in temperate zone: <i>Grassland in drier climates in temperate zone. No trees grow.</i>
			100	Semi-desert in temperate zone: <i>Heavily dried area in the temperate zone. Grasses, such as mugwort and pigweed cover this area.</i>
			110	Desert in temperate zone: <i>Extremely dried area in temperate zone. Grasses, such as mugwort and pigweed cover this area.</i>
			120	Northern coniferous forest: <i>Coniferous trees in semi-frigid zone which has very cold and long winter. Trees in this forest are usually evergreen</i>
			130	Tundra: <i>Plant colony consists of shrub, grass with broad leaves, moss and lichen. Trees cannot become tall due to severe cold.</i>
			140	Water body: <i>Water surfaces, such as rivers and lakes.</i>
			150	Ice and snow: <i>Area which is covered with snow and ice throughout the year.</i>
			210	Wetland: <i>Vegetated area with waterlogged soils or surface water for significant periods of the year.</i>
			220	Mixed forest: <i>Forest containing a mixture of types. Usually deciduous and coniferous.</i>
			230	Mixed land: <i>Area containing a mosaic of other types.</i>
			240	Non natural: <i>Cultivated, urban or otherwise modified vegetation.</i>
			250	Unclassified: <i>Areas not included in other classifications. For example, barren land.</i>
Land Cover	International Geosphere Biosphere Programme Land Cover Classification (DISCOVer data set)	cell	1	Evergreen Needleleaf Forest: <i>Lands dominated by trees with a percent canopy cover &gt;60% and height exceeding 2 meters. Almost all trees remain green all year. Canopy is never without green foliage.</i>

*Global Map Specifications*

			2	Evergreen Broadleaf Forest: Lands dominated by trees with a percent canopy cover > 60% and height exceeding 2 meters. Almost all trees remain green all year. Canopy is never without green foliage.
			3	Deciduous Needleleaf Forest: Lands dominated by trees with a percent canopy cover > 60% and height exceeding 2 meters. Consists of seasonal needleleaf tree communities with an annual cycle of leaf-on and leaf-off periods.
			4	Deciduous Broadleaf Forest: Lands dominated by trees with a percent canopy cover > 60% and height exceeding 2 meters. Consists of seasonal broadleaf tree communities with an annual cycle of leaf-on and leaf-off periods.
			5	Mixed Forest: Lands dominated by trees with a percent canopy cover > 60% and height exceeding 2 meters. Consists of tree communities with interspersed mixtures or mosaics of the other four forest cover types. None of the forest types exceeds 60% of the landscape.
			6	Closed Shrublands: Lands with woody vegetation less than 2 meters tall and with shrub canopy cover > 60%. The shrub foliage can be either evergreen or deciduous.
			7	Open Shrublands: Lands with woody vegetation less than 2 meters tall and with shrub canopy cover between 10-60%. The shrub foliage can be either evergreen or deciduous.
			8	Woody Savannas: Lands with herbaceous and other understory systems, and with forest canopy cover between 3-60%. The forest cover height exceeds 2 meters.
			9	Savannas: Lands with herbaceous and other understory systems, and with forest canopy cover between 10-30%. The forest cover height exceeds 2 meters.
			10	Grasslands: Lands with herbaceous types of cover. Tree and shrub cover is less than 10%.
			11	Permanent Wetlands: Lands with a permanent mixture of water and herbaceous or woody vegetation that cover extensive areas. The vegetation can be present in either salt, brackish, or fresh water.
			12	Croplands: Lands covered with temporary crops followed by harvest and a bare soil period (e.g., single and multiple cropping systems). Note that perennial woody crops will be classified as the appropriate forest or shrub land cover type.
			13	Urban and Built-Up: Land covered by buildings and other man-made structures.
			14	Cropland/Natural Vegetation Mosaic: Lands with a mosaic of croplands, forests, shrublands, and grasslands in which no one component comprises more than 60% of the landscape.
			15	Snow and Ice: Lands under snow and/or ice cover throughout the year.
			16	Barren or Sparsely Vegetated: Lands with exposed soil, sand, rocks, or snow and never has more than 10% vegetated cover during any time of the year.
			17	Water Bodies: Oceans, seas, lakes, reservoirs, and rivers. Can be either fresh or salt water bodies.

**(Informative) Table 4 Comparative listing between the legend of land cover based on current specifications (after version 1.3) and former ones (before version 1.2.1)**

Land cover data based on former Specifications (before version 1.2.1) are also available together with ones based on specifications after version 1.3. Comparative listing between current land cover legend and former one is shown below for reference.

Current land Cover (After Specification version 1.3)	Former land cover (Before specifications version 1.2.1)
1. Broadleaf Evergreen Forest	2. Evergreen Broadleaf Forests
2. Broadleaf Deciduous Forest	4. Deciduous Broadleaf Forests
3. Needleleaf Evergreen Forest	1. Evergreen Needleleaf Forests
4. Needleleaf Deciduous Forest	3. Deciduous Needleleaf Forests
5. Mixed Forest	5. Mixed Forests
6. Tree Open	8. Woody Savannas
7. Shrub	6. Closed Shrublands 7. Open Shrublands
8. Herbaceous, single layer	10. Grasslands
9. Herbaceous with Sparse and Tree/Shrub	9. Savanna
10. Sparse Vegetation	16. Barren
11. Cropland	12. Croplands
12. Paddy field	
13. Cropland/Natural Vegetation Mosaic	14. Cropland/Natural Vegetation Mosaics
14. Mangrove	11. Permanent Wetlands
15. Wetland	
16. Bare area, consolidated (gravel, rock)	16. Barren
17. Bare area, unconsolidated (sand)	
18. Urban	13. Urban and Built-up
19. Snow/Ice	15. Snow and Ice
20. Water Bodies	17. Water Bodies

## APPENDIX G Metadata

### 1. Foreword

Global Map Metadata Profile is based on ISO 19115 core metadata elements and other profiles to provide information about Global Map data. This profile is created strictly according to the rules for creating a profile in ISO/IS 19115 clause C6.

### 2. Normative reference

All normative references of this profile are the same as ISO19115.

### 3. Terms, definitions, symbols and abbreviated terms

Terms, definitions, symbols and abbreviated terms used in this profile refer to those in ISO19115.

### 4. Metadata

#### 4.1 Descriptions of Metadata package

Metadata package members of this metadata profile are shown in the following table. Metadata package is a subset of metadata that define the related metadata entities and elements. Metadata element is a base component of metadata and assembly of elements will be a metadata entity. Moreover, assembly of entity under the same theme will be a metadata package. Metadata package corresponds to UML (Unified Modeling Language) package, metadata entity corresponds to UML class, and metadata element corresponds to UML class or role of association.

Package	Explanation
Metadata entity set information	This package includes all root classes for describing metadata, and indicates their correlation
Identification information	Identification information is for identifying particular data set. It includes citation, abstract, purpose, credits and contact information of the information resource.
Constraint information	This package includes information about constraint matters such as access constraints and use constraints.
Data quality information	This package is composed of information describing the quality of the data. Lineage information is described.
Maintenance information	This package is composed of information describing the maintenance and update practice for information.
Reference system	This package is composed of information describing the spatial reference

information	system used.
Distribution information	This package is composed of information describing the information for accessing resource.
Extent information	This package is composed of information describing the spatial and temporal extent covered by a resource.
Citation and responsible party information	This package is composed of authoritative reference information including responsible party and contact information.

## 4.2 Relationship between Metadata packages and Metadata entities

Relationship between metadata packages and metadata entities is shown in the following table.

Metadata entity corresponding to the package is listed in the second line (named entity).

Corresponding numbers are also indicated in UML diagram line and data dictionary line.

Metadata package	Entity	UML diagram (Figure)	Data dictionary
Metadata entity set information	MD_Metadata	G.A.1	G.B.2.1
Identification information	MD_Identification	G.A.2	G.B.2.2
Constraint information	MD_Constraints	G.A.3	G.B.2.3
Data quality information	DQ_DataQuality	G.A.4	G.B.2.4
Lineage information	LI_Lineage	G.A.5	G.B.2.4
Maintenance information	MD_MaintenanceInformation	G.A.6	G.B.2.5
Reference system information	MD_ReferenceSystem	G.A.7	G.B.2.6
Distribution information	MD_Distribution	G.A.8	G.B.2.7
Extent information	EX_Extent	G.A.9	G.B.3.1
Citation and responsible party information	CI_Ciation CI_ResponsibleParty	G.A.10	G.B.3.2

## Annex G.A (normative)

### Metadata schemas

#### G.A.1 Metadata UML models

Metadata for describing Global Map data is defined using an abstract object model in the Unified Modeling Language (UML)

#### G.A.2 Metadata package UML diagrams

##### G.A.2.1 Metadata entity set information

Figure G.A.1 defines the class “MD\_Metadata” and shows containment relationships with the other metadata classes which, in aggregate, define metadata for geographic data. The other metadata class diagrams can be found on the following pages. The data dictionary for this diagram is located in G.B.2.1.

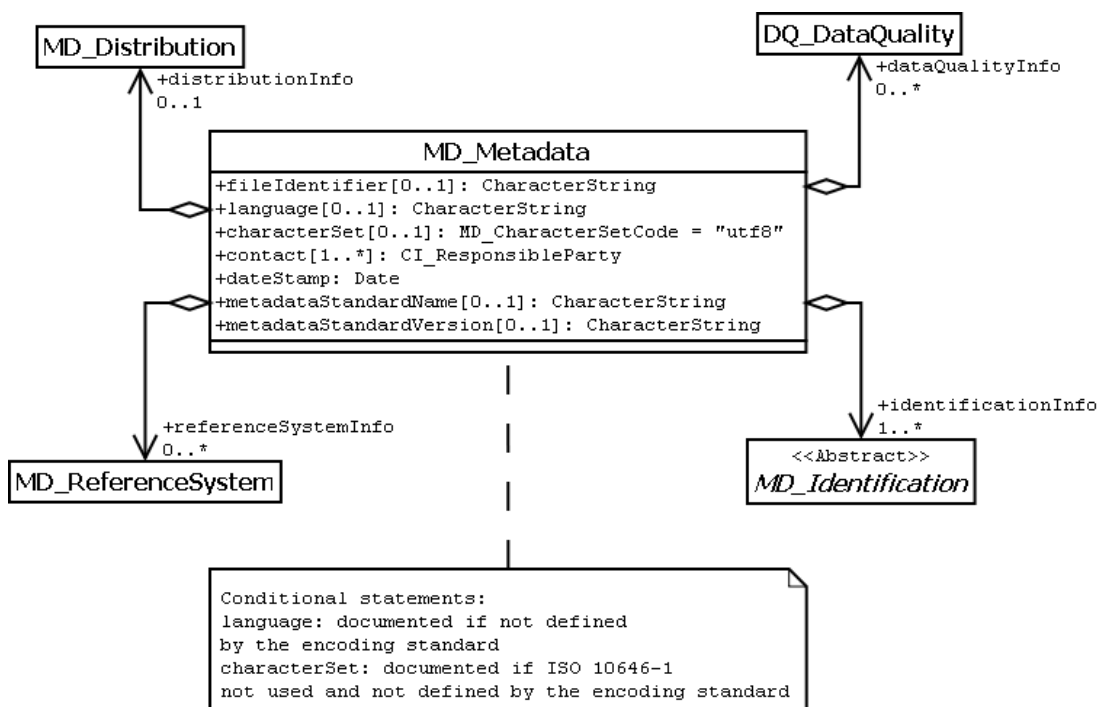

Figure G.A.1 --- Metadata entity set information

### G.A.2.2 Identification information

Figure G.A.2 defines the metadata classes required to identify a resource. It also defines separate specialization sub-classes for identifying data and services. The data dictionary for this diagram is located in G.B.2.2.

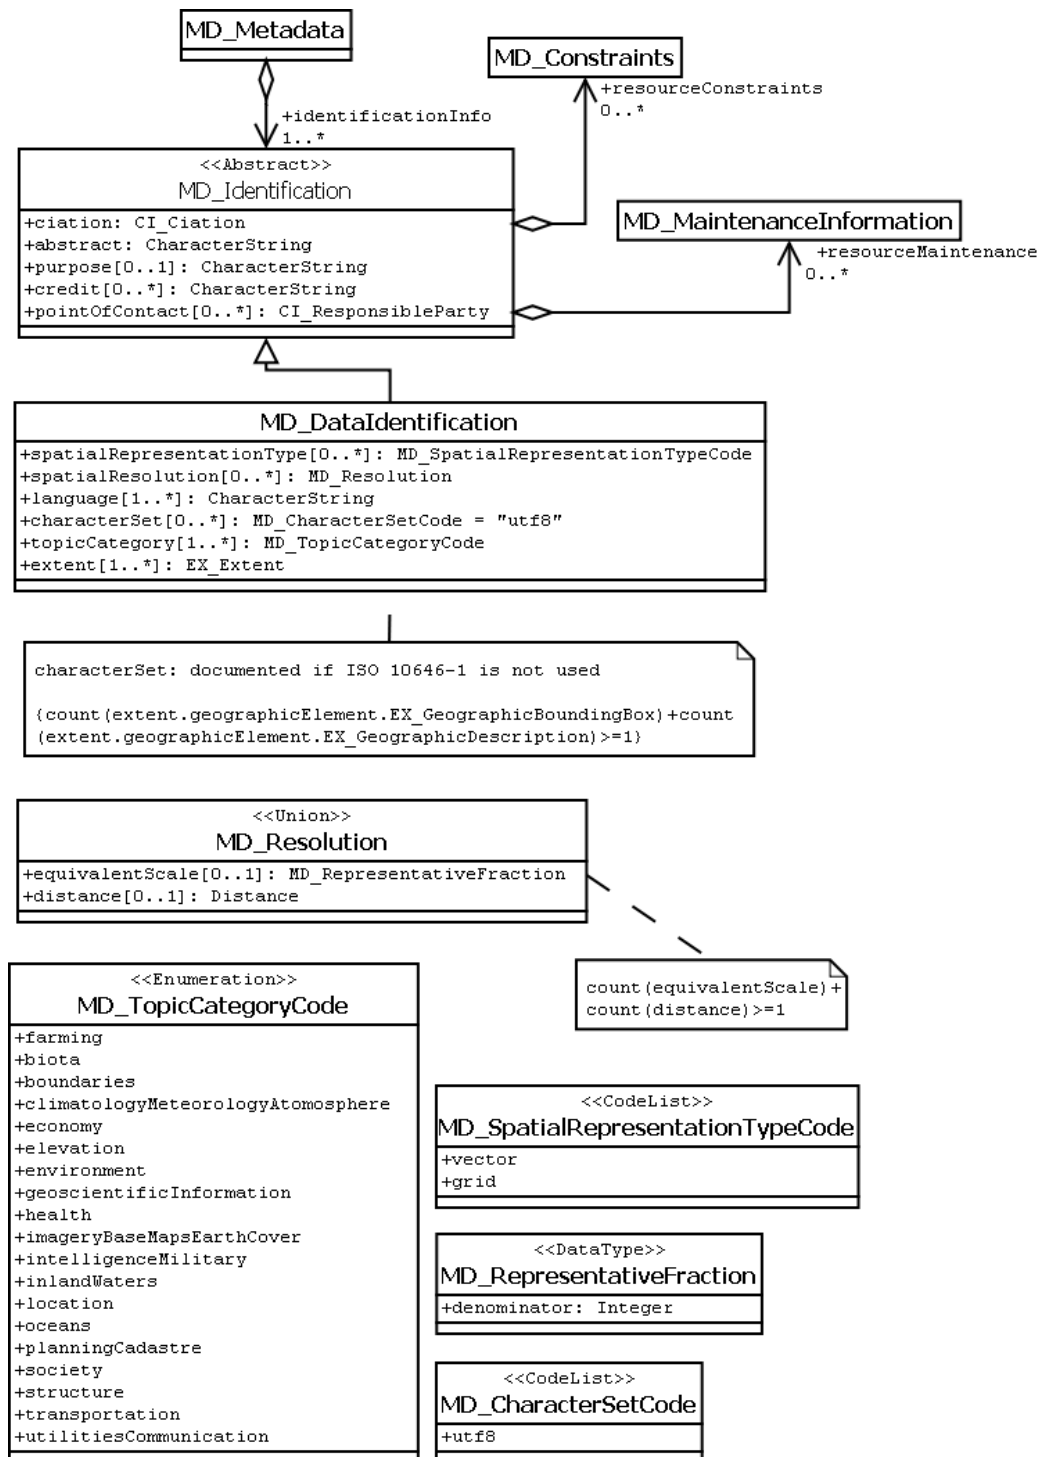

Figure G.A.2 --- Identification information

### G.A.2.3 Constraint information

Figure G.A.3 defines the metadata required for managing rights to information including restrictions on access and use. The data dictionary for this diagram is located in G.B.2.3

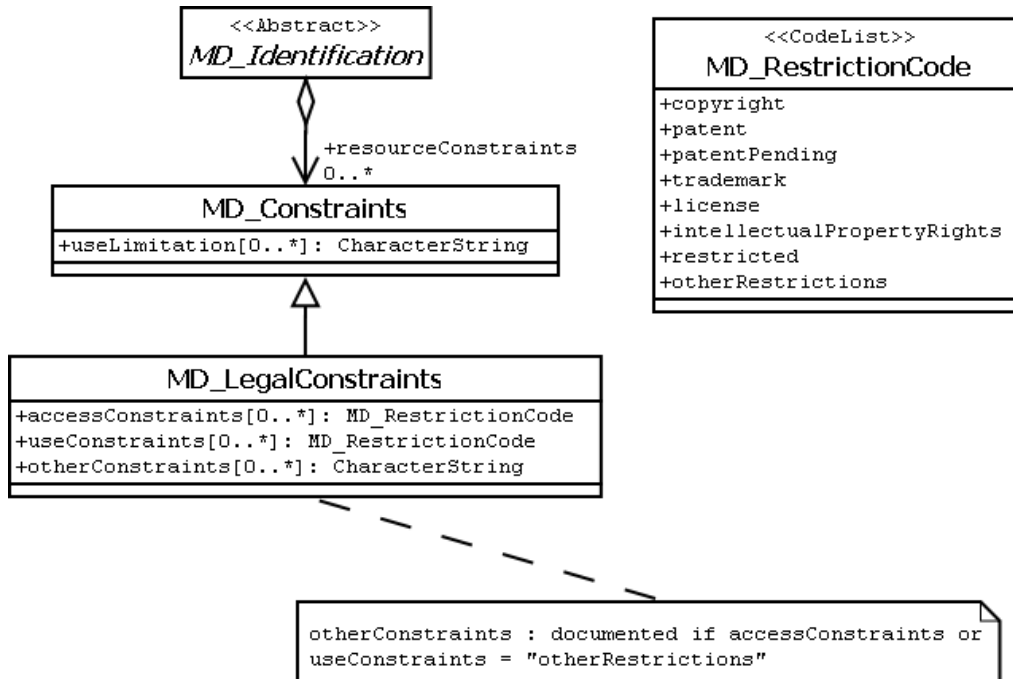

Figure G.A.3 --- Constraint information

### G.A.2.4 Data quality information

#### G.A.2.4.1 General

Figure G.A.4 defines the metadata required to give a general assessment of the quality of resource. The data dictionary for this diagram is located in G.B.2.4

Figure G.A.4 --- Data quality information

### G.A.2.4.2 Lineage information

Figure G.A.5 defines metadata required to describe the sources and production processes used in producing a dataset. The data dictionary for this diagram is located in G.B.2.4.

Figure G.A.5 --- Lineage information

### G.A.2.5 Maintenance information

Figure G.A.6 defines the metadata required to describe the maintenance and update practices for information. The data dictionary for this diagram is located in G.B.2.5.

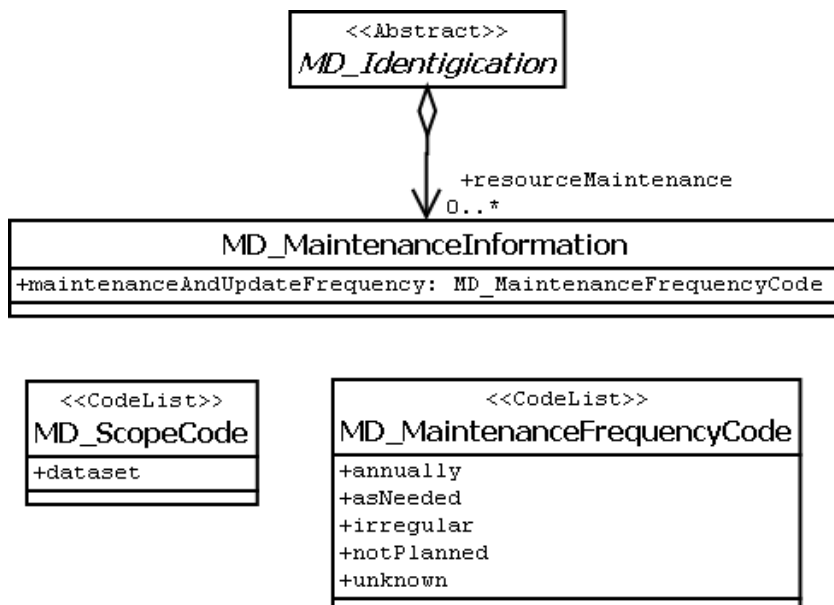

Figure G.A.6 --- Maintenance information

### G.A.2.6 Reference system information

Figure G.A.7 defines metadata required to describe the spatial and temporal reference system used. The data dictionary for this diagram is located in G.B.2.6

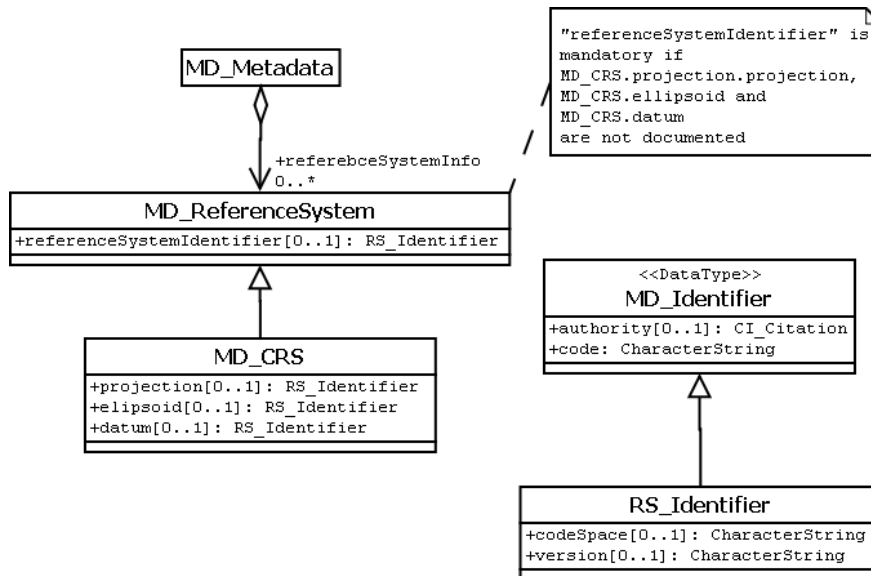

Figure G.A.7 --- Reference system information

### G.A.2.7 Distribution information

Figure G.A.8 defines metadata required for accessing a resource. The data dictionary for this diagram is located in G.B.2.7

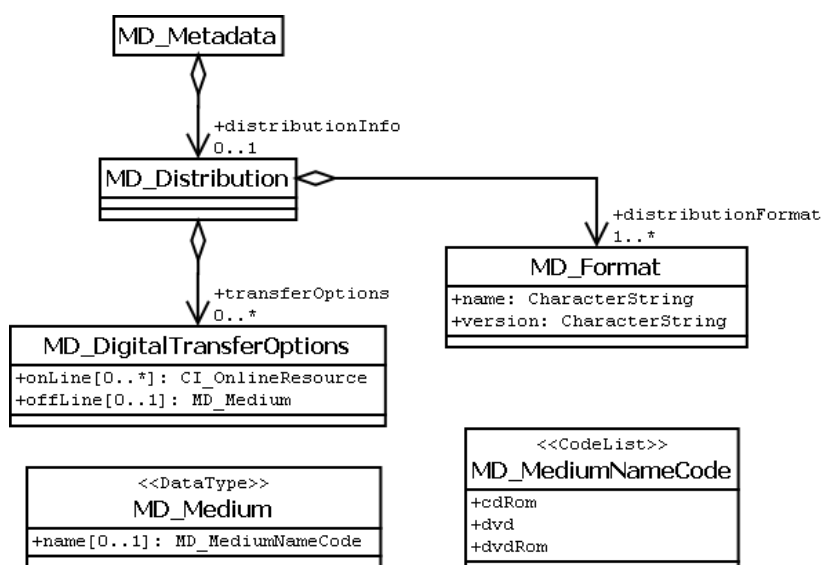

Figure G.A.8 --- Distribution information

### G.A.3 Metadata data types

#### G.A.3.1 Extent information

Figure G.A.9 defines metadata describing the spatial and temporal extent covered by a resource. The data dictionary for this diagram is located in G.B.3.1.

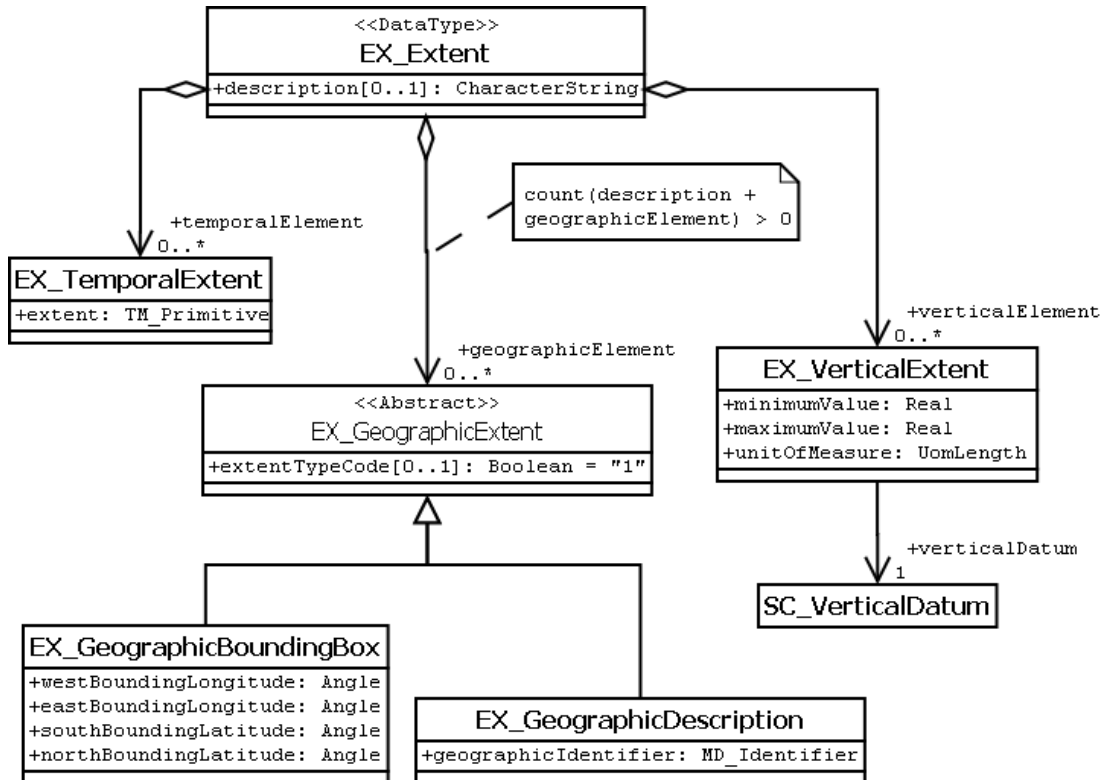

Figure G.A.9 --- Extent information

### G.A.3.2 Citation and responsible party information

Figure G.A.10 defines metadata describing authoritative reference information, including responsible party and contact information. The data dictionary for this diagram is located in G.B.3.2.

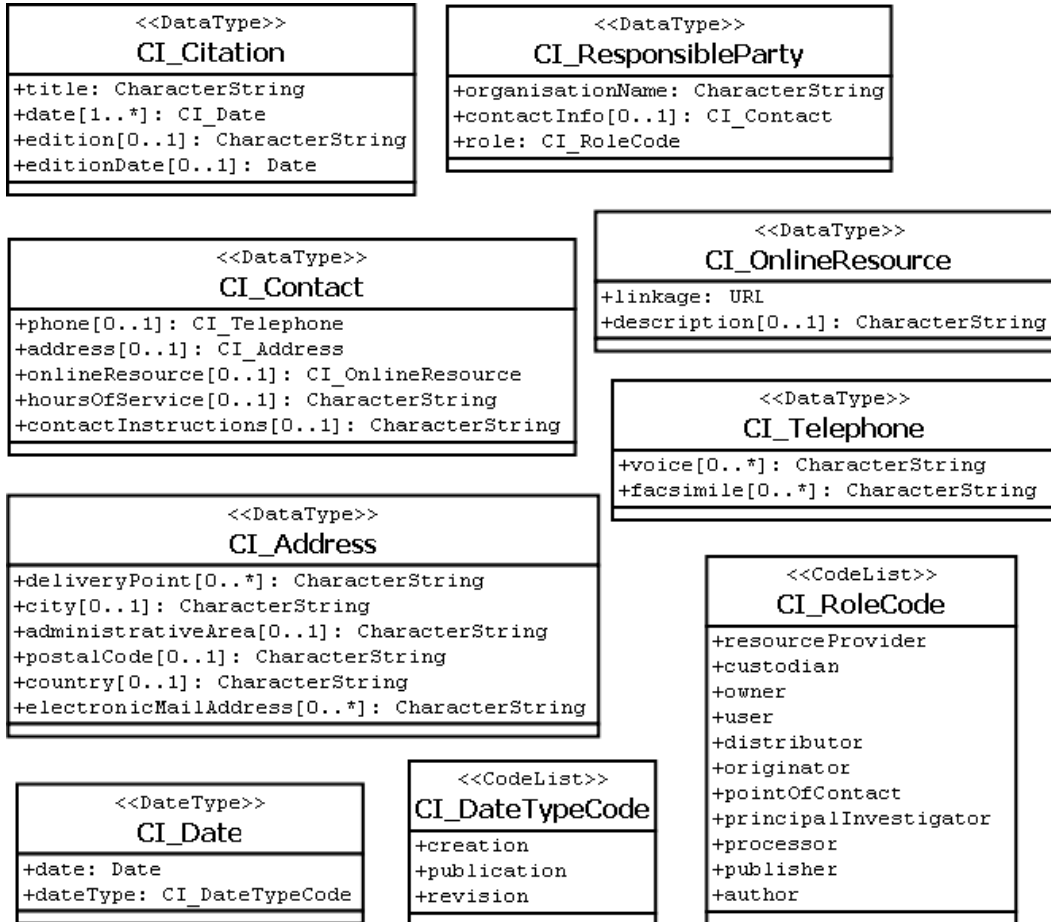

Figure G.A.10--- Citation and responsible party information

## Annex G.B (normative)

### Data Dictionary for geographic metadata

#### G.B.1 Data dictionary overview

This data dictionary describes the characteristic of the metadata defined in Clause 6 and Annex G.A. A metadata entity or metadata element shall always be documented in the metadata or sometimes documented. This descriptor may have the following values: M (mandatory), C (conditional), or O (optional). Maximum occurrence specifies the maximum number of instances the metadata entity or the metadata element may have. Single occurrences are shown by “1”; repeating occurrences are represented by “N.” For an entity, the domain indicates the line numbers covered by that entity. For a metadata element, the domain specifies the values allowed or use of free text.

#### G.B.2 Metadata package data dictionary

##### G.B.2.1 Metadata entity set information

UML model shown in Figure G.A.1.

No.	ISONo.	Name / Role name	Definition	Obligation / Condition	Maximum occurrence	Data type	Domain
1	1	MD_Metadata	root entity which defines metadata about a resource or resources	M	1	Class	
2	2	fileIdentifier	unique identifier for this metadata file	O	1	CharacterString	Free Text

*Global Map Specifications*

3	3	language	language used for documenting metadata	M	1	CharacterString	ISO639-2, other parts may be used
4	4	characterSet	full name of the character coding standard used for the metadata set	C / ISO/IEC 10646-1 not used and not defined by encoding?	1	Class	MD_CharacterSetCode <<CodeList>>
5	8	contact	party responsible for the metadata information	M	N	Class	CI_ResponsibleParty <<Data Type>>
6	9	dateStamp	date that the metadata was created	M	1	Class	Date
7	10	metadataStandardName	name of the metadata standard (including profile name) used	O	1	CharacterString	Free Text
8	11	metadataStandardVersion	version (profile) of the metadata standard used	O	1	CharacterString	Free Text
9	13	Role name: referenceSystemInfo	description of the spatial and temporal reference systems used in the dataset	O	N	Association	MD_ReferenceSystem
10	15	Role name: identificationInfo	basic information about the resource(s) to which the metadata applies	M	N	Association	MD_Identification <<Abstract>>
11	17	Role name: distributionInfo	provides information about the distributor of and options for obtaining the resource(s)	O	1	Association	MD_Distribution
12	18	Role name: dataQualityInfo	provides overall assessment of quality of a resource(s)	O	N	Association	DQ_DataQuality

## G.B.2.2 Identification information

### G.B.2.2.1 General

UML model shown in Figure G.A.2

No.	ISO No.	Name / Role name	Definition	Obligation / Condition	Maximum occurrence	Data type	Domain
13	23	MD_Identification	basic information required to uniquely identify a resource or resources	Use obligation from referencing object	use maximum occurrence from referencing object	Aggregated Class (MD_Metadata) <<Abstract>>	
14	24	citation	citation data for the resource(s)	M	1	Class	CI_Citation <<Data Type>>
15	25	abstract	brief narrative summary of the content of the resource(s)	M	1	CharacterString	
16	26	purpose	summary of the intentions with which the resource(s) was developed	O	1	CharacterString	
17	27	credit	recognition of those who contributed to the resource(s)	O	N	CharacterString	
18	29	pointOfContact	identification of, and means of communication with, person(s) and organization(s) associated with the resource(s)	O	N	Class	CI_ResponsibleParty <<Data Type>>
19	30	<i>Role name:</i> resourceMaintenance	Provides information about the frequency of resource updates, and the scope of those updates	O	N	Association	MD_MaintenanceInformation

Global Map Specifications

20	35	Role name: resourceConstraints	provides information about constraints which apply to the resource(s)	O	N	Association	MD_Constraints
21	36	MD_DataIdentification	information required to identify a dataset	Use obligation from referencing object	use maximum occurrence from referencing object	Specified Class (MD_Identification)	
22	37	spatialRepresentationType	method used to spatially represent geographic information	O	N	Class	MD_SpatialRepresentationTypeCode <<Code List>>
23	38	spatialResolution	factor which provides a general understanding of the density of spatial data in the dataset	O	N	Class	MD_Resolution <<Union>>
24	39	language	language(s) used within the dataset	M	N	CharacterString	ISO639-2, other parts may be used
25	40	characterSet	full name of the character coding standard used for the dataset	C / ISO/IEC 10646-1 not used?	N	Class	MD_CharacterSetCode <<Code List>>
26	41	topicCategory	main theme(s) of the dataset	M	N	Class	MD_TopicCategoryCode <<Enumeration>>
27	45	extent	extent information including the bounding box, bounding polygon, vertical, and temporal extent of the dataset	M	N	Class	EX_Extent <<Data Type>>

**G.B.2.2.2 Representative fraction information**

No.	ISO No.	Name / Role name	Definition	Obligation / Condition	Maximum occurrence	Data type	Domain
28	56	MD_RepresentativeFraction	derived from ISO 19103 Scale where MD_RepresentativeFraction.denominator = 1 / Scale.measure And Scale.targetUnits = Scale.sourceUnits	Use obligation from referencing object	Use maximum occurrence from referencing object	Class <<Data Type>>	
29	57	denominator	the number below the line in a vulgar fraction	M	1	Integer	Integer > 0

**G.B.2.2.3 Resolution information**

No.	ISO No.	Name / Role name	Definition	Obligation / Condition	Maximum occurrence	Data type	Domain
30	59	MD_Resolution	level of detail expressed as a scale factor or a ground distance	Use obligation from referencing object	Use maximum occurrence from referencing object	Class <<Union>>	
31	60	equivalentScale	level of detail expressed as the scale of a comparable hardcopy map or chart	C / distance not documented?	1	Class	MD_RepresentativeFraction <<Data Type>>
32	61	distance	ground sample distance	C / equivalentScale not documented?	1	Class	Distance

### G.B.2.3 Constraint information

UML model shown in Figure G.A.3

No.	ISO No.	Name / Role name	Definition	Obligation / Condition	Maximum occurrence	Data type	Domain
33	67	MD_Constraints	restrictions on the access and use of a resource of metadata	Use Obligation from referencing object	Use maximum occurrence from referencing object	Aggregated Class (MD_Identification)	
34	68	useLimitation	limitation affecting the fitness for use of the resource or metadata. Example, "not to be used for navigation"	O	N	CharacterString	Free text
35	69	MD_LegalConstraints	restrictions and legal prerequisites for accessing and using the resource or metadata	Use Obligation from referencing object	N	Specified Class (MD_Constraints)	
36	70	accessConstraints	access constraints applied to assure the protection of privacy or intellectual property, and any special restrictions or limitations on obtaining the resource or metadata	O	N	Class	MD_RestrictionCode <<Code List>>
37	71	useConstraints	constraints applied to assure the protection of privacy or intellectual property, and any special restrictions or limitations or warnings on using the resource or metadata	O	N	Class	MD_RestrictionCode <<Code List>>

38	72	otherConstraints	other restrictions and legal prerequisites for accessing and using the resource or metadata	C / access Constraints or use Constraints equal "other Restrictions"?	N	CharacterString	Free text
----	----	------------------	---	---	---	-----------------	-----------

## G.B.2.4 Data quality information

### G.B.2.4.1 General

UML model shown in Figure G.A.4, G.A.5

No.	ISO No.	Name / Role name	Definition	Obligation / Condition	Maximum occurrence	Data type	Domain
39	78	DQ_DataQuality	quality information for the data specified by a data quality scope	Use Obligation from referencing object	Use maximum occurrence from referencing object	Aggregated Class (MD_Metadata)	
40	79	scope	the specific data to which the data quality information applies	M	1	Class	DQ_Scope
41	81	Role name: lineage	non-quantitative quality information about the lineage of the data specified by the scope	M	1	Association	LI_Lineage

**G.B.2.4.2 Lineage information****G.B.2.4.2.1 General**

No.	ISO No.	Name / Role name	Definition	Obligation / Condition	Maximum occurrence	Data type	Domain
42	82	LI_Lineage	information about the events or source data used in constructing the data specified by the scope or lack of knowledge about lineage	Use obligation from referencing object	Use maximum occurrence from referencing object	Aggregated Class (DQ_DataQuality)	
43	83	statement	general explanation of the data producer's knowledge about the lineage of a dataset	M	1	CharacterString	Free text

**G.B.2.4.3 Scope information**

No.	ISO No.	Name / Role name	Definition	Obligation / Condition	Maximum occurrence	Data type	Domain
44	138	DQ_Scope	extent of characteristic(s) of the data for which quality information is reported	Use obligation from referencing object	Use maximum occurrence from referencing object	Class <<DataType>>	
45	139	level	hierarchical level of the data specified by the scope	M	1	Class	MD_ScopeCode <<CodeList>>

## G.B.2.5 Maintenance information

### G.B.2.5.1 General

UML model shown in Figure G.A.6

No.	ISO No.	Name / Role name	Definition	Obligation / Condition	Maximum occurrence	Data type	Domain
46	142	MD_MaintenanceInformation	information about the scope and frequency of updating	Use obligation from referencing object	Use maximum occurrence from referencing object	Aggregated Class (MD_Identification)	
47	143	maintenanceAndUpdateFrequency	frequency with which changes and additions are made to resource after the initial resource is completed	M	1	Class	MD_MaintenanceFrequencyCode <<CodeList>>

## G.B.2.6 Reference system information

### G.B.2.6.1 General

UML model shown in Figure G.A.7

No.	ISO No.	Name / Role name	Definition	Obligation / Condition	Maximum occurrence	Data type	Domain
48	186	MD_ReferenceSystem	information about the reference system	Use obligation/condition from referencing object	Use maximum occurrence from referencing object	Aggregated Class (MD_Metadata)	

49	187	referenceSystemIdentifier	name of reference system	C / MD_CRS. projection, MD_CRS. Ellipsoid, and MD_CRS.datum not documented?	1	Class	RS_Identifier
50	189	MD_CRS	metadata about a coordinate system in which attributes have been derived from SC_CRS as defined in ISO 19111 - Spatial referencing by coordinates	Use obligation/condition from referencing object	Use maximum occurrence from referencing object	Specified Class (MD_Referencing System)	
51	190	projection	identity of the projection used	O	1	Class	RS_Identifier
52	191	ellipsoid	identity of the ellipsoid used	O	1	Class	RS_Identifier
53	192	datum	identity of the datum used	O	1	Class	RS_Identifier

#### G.B.2.6.2 Identifier information

No.	ISO No.	Name / Role name	Definition	Obligation / Condition	Maximum occurrence	Data type	Domain
54	205	MD_Identifier	value uniquely identifying an object within a namespace	Use obligation/condition from referencing object	Use maximum occurrence from referencing object	Class	
55	206	authority	person or party responsible for maintenance of the namespace	O	1	Class	CI_Citation
56	207	code	alphanumeric value identifying an instance in the namespace	M	1	CharacterString	Free text

57	208	RS_Identifier	identifier used for reference systems	Use obligation/condition from referencing object	Use maximum occurrence from referencing object	Specified Class (MD_Identifier)	
58	208.1	codeSpace	name or identifier of the person or organization responsible for namespace	O	1	CharacterString	Free text
59	208.2	version	version identifier for the namespace	O	1	CharacterString	Free text

## G.B.2.7 Distribution information

### G.B.2.7.1 General

UML model shown in Figure G.A.8

No.	ISO No.	Name / Role name	Definition	Obligation / Condition	Maximum occurrence	Data type	Domain
60	270	MD_Distribution	information about the distributor of and options for obtaining the resource	Use obligation/condition from referencing object	Use maximum occurrence from referencing object	Aggregated Class (MD_Metadata)	
61	271	Role name: distributionFormat	provides a description of the format of the data to be distributed	M	N	Association	MD_Format

62	273	Role name: transferOptions	provides information about technical means and media by which a resource is obtained from the distributor	O	N	Association	MD_DigitalTransferOptions
----	-----	-------------------------------	---	---	---	-------------	---------------------------

### G.B.2.7.2 Digital transfer options information

No.	ISO No.	Name / Role name	Definition	Obligation / Condition	Maximum occurrence	Data type	Domain
63	274	MD_DigitalTransferOptions	technical means and media by which a resource is obtained from the distributor	Use obligation/condition from referencing object	Use maximum occurrence from referencing object	Aggregated Class (MD_Distribution)	
64	277	onLine	information about online sources from which the resource can be obtained	O	N	Class	CI_OnlineResource <<Data Type>>
65	278	offLine	information about offline media on which the resource can be obtained	O	1	Class	MD_Medium <<Data Type>>

**G.B.2.7.3 Format information**

No.	ISO No.	Name / Role name	Definition	Obligation / Condition	Maximum occurrence	Data type	Domain
66	284	MD_Format	description of the computer language construct that specifies the representation of data objects in a record, file, message, storage device or transmission channel	Use obligation/condition from referencing object	Use maximum occurrence from referencing object	Aggregated Class (MD_Distribution)	
67	285	name	name of the data transfer format(s)	M	1	CharacterString	Free text
68	286	version	version of the format (date, number, etc.)	M	1	CharacterString	Free text

**G.B.2.7.4 Medium information**

No.	ISO No.	Name / Role name	Definition	Obligation / Condition	Maximum occurrence	Data type	Domain
69	291	MD_Medium	information about the media on which the resource can be distributed	Use obligation/condition from referencing object	Use maximum occurrence from referencing object	Aggregated Class (MD_Distribution)	
70	292	name	name of the medium on which the resource can be received	O	1	Class	MD_MediumNameCode <<CodeList>>

### G.B.3 Data type information

#### G.B.3.1 Extent information

##### G.B.3.1.1 General

UML model shown in Figure G.A.9

No.	ISO No.	Name / Role name	Definition	Obligation / Condition	Maximum occurrence	Data type	Domain
71	334	EX_Extent	information about horizontal, vertical, and temporal extent	Use obligation/condition from referencing object	Use maximum occurrence from referencing object	Class<<Data Type>>	
72	335	description	spatial and temporal extent for the referring object	C / geographicElement not documented?	1	CharacterString	FreeText
73	336	Role name: geographicElement	provides temporal component of the extent of the referring object	C / description not documented?	N	Association	EX_GeographicExtent <<Abstract>>
74	337	Role name: temporalElement	provides temporal component of the extent of the referring object	O	N	Association	EX_TemporalExtent
75	338	Role name: verticalElement	provides vertical component of the extent of the referring object	O	N	Association	EX_VerticalExtent

**G.B.3.1.2 Geographic extent information**

No.	ISO No.	Name / Role name	Definition	Obligation / Condition	Maximum occurrence	Data type	Domain
76	339	EX_GeographicExtent	geographic area of the dataset	Use obligation/condition from referencing object	Use maximum occurrence from referencing object	Aggregated Class (EX_Extent) <<Abstract>>	
77	340	extentTypeCode	indication of whether the bounding polygon encompasses an area covered by the data or an area where data is not present	O	1	Boolean	0-exclusion 1-inclusion
78	343	EX_GeographicBoundingBox	geographic position of the dataset NOTE This is only an approximate reference so specifying the coordinate reference system is unnecessary	Use obligation/condition from referencing object	Use maximum occurrence from referencing object	Specified Class (EX_GeographicExtent)	
79	344	westBoundLongitude	western-most coordinate of the limit of the dataset extent, expressed in longitude in decimal degrees (positive east)	M	1	Class	Angle
80	345	eastBoundLongitude	eastern-most coordinate of the limit of the dataset extent, expressed in longitude in decimal degrees (positive east)	M	1	Class	Angle
81	346	southBoundLatitude	southern-most coordinate of the limit of the dataset extent, expressed in latitude in decimal	M	1	Class	Angle

			degrees (positive north)				
82	347	northboundLatitude	northern-most coordinate of the limit of the dataset extent, expressed in latitude in decimal degrees (positive north)	M	1	Class	Angle
83	348	EX_GeographicDescription	description of the geographic area using identifiers	Use obligation/condition from referencing object	Use maximum occurrence from referencing object	Specified Class (EX_Geographic Extent)	
84	349	geographicIdentifier	identifier used to represent a geographic area	M	1	Class	MD_Identifier

### G.B.3.1.3 Temporal extent information

No.	ISO No.	Name / Role name	Definition	Obligation / Condition	Maximum occurrence	Data type	Domain
85	350	EX_TemporalExtent	time period covered by the content of the dataset	Use obligation/condition from referencing object	Use maximum occurrence from referencing object	Aggregated Class (EX_Extent)	
86	351	extent	date and time for the content of the dataset	M	1	Class	TM_Primitive

**G.B.3.1.4 Vertical extent information**

No.	ISO No.	Name / Role name	Definition	Obligation / Condition	Maximum occurrence	Data type	Domain
87	354	EX_VerticalExtent	vertical domain of dataset	Use obligation/condition from referencing object	Use maximum occurrence from referencing object	Aggregated Class (EX_Extent)	
88	355	minimumValue	lowest vertical extent contained in the dataset	M	1	Real	Real
89	356	maximumValue	highest vertical extent contained in the dataset	M	1	Real	Real
90	357	unitOfMeasure	vertical units used for vertical extent information Examples: metres, feet, millimetres, hectopascals	M	1	Class	UomLength
91	358	role name: verticalDatum	provides information about the origin from which the maximum and minimum elevation values are measured	M	1	Association	SC_VerticalDatum

## G.B.3.2 Citation and responsible party information

### G.B.3.2.1 General

UML model shown in Figure G.A.10

No.	ISO No.	Name / Role name	Definition	Obligation / Condition	Maximum occurrence	Data type	Domain
92	359	CI_Citation	standardized resource reference	Use obligation/condition from referencing object	Use maximum occurrence from referencing object	Class <<Data Type>>	
93	360	title	name by which the cited resource is known	M	1	CharacterString	Free text
94	362	date	reference date for the cited resource	M	N	Class	CI_Date <<DataType>>
95	363	edition	version of the cited resource	O	1	CharacterString	Free text
96	364	editionDate	date of the edition	O	1	Class	Date
97	374	CI_ResponsibleParty	identification of, and means of communication with, person(s) and organizations associated with the dataset	Use obligation/condition from referencing object	Use maximum occurrence from referencing object	Class <<Data Type>>	
98	376	organisationName	name of the responsible organization	M	1	CharacterString	Free text
99	378	contactInfo	address of the responsible party	O	1	Class	CI_Contact
100	379	role	function performed by the responsible party	M	1	Class	CI_RoleCode <<CodeList>>

**G.B.3.2.2 Address information**

No.	ISO No.	Name / Role name	Definition	Obligation / Condition	Maximum occurrence	Data type	Domain
101	380	CI_Address	location of the responsible individual or organization	Use obligation/condition from referencing object	Use maximum occurrence from referencing object	Class <<Data Type>>	
102	381	deliveryPoint	address line for the location (as described in ISO 11180, Annex A)	O	N	CharacterString	Free text
103	382	city	city of the location	O	1	CharacterString	Free text
104	383	administrativeArea	state, province of the location	O	1	CharacterString	Free text
105	384	postalCode	ZIP or other postal code	O	1	CharacterString	Free text
106	385	country	country of the physical address	O	1	CharacterString	Free text
107	386	electronicMailAddress	address of the electronic mailbox of the responsible organization or individual	O	N	CharacterString	Free text

**G.B.3.2.3 Contact information**

No.	ISO No.	Name / Role name	Definition	Obligation / Condition	Maximum occurrence	Data type	Domain
108	387	CI_Contact	information required to enable contact with the responsible person and/or organization	Use obligation/condition from referencing object	Use maximum occurrence from referencing object	Class <<Data Type>>	
109	388	phone	telephone numbers at which the organization or individual may be contacted	O	1	Class	CI_Telephone
110	389	address	physical and email address at which the organization or individual may be contacted	O	1	Class	CI_Address
111	390	onlineResource	on-line information that can be used to contact the individual or organization	O	1	Class	CI_OnlineResource
112	391	hoursOfService	time period (including time zone) when individuals can contact the organization or individual	O	1	CharacterString	Free text
113	392	contactInstructions	supplemental instructions on how or when to contact the individual or organization	O	1	CharacterString	Free text

**G.B.3.2.4 Date information**

No.	ISO No.	Name / Role name	Definition	Obligation / Condition	Maximum occurrence	Data type	Domain
114	393	CI_Date	reference date and event used to describe it	Use obligation/condition from referencing object	Use maximum occurrence from referencing object	Class <<Data Type>>	
115	394	date	reference date for the cited resource	M	1	Class	Date
116	395	dateType	event used for reference date	M	1	Class	CI_DateTypeCode <<CodeList>>

**G.B.3.2.5 OnLine resource information**

No.	ISO No.	Name / Role name	Definition	Obligation / Condition	Maximum occurrence	Data type	Domain
117	396	CI_OnlineResource	information about on-line sources from which the dataset, specification, or community profile name and extended metadata elements can be obtained	Use obligation/condition from referencing object	Use maximum occurrence from referencing object	Class <<Data Type>>	
118	397	linkage	location (address) for on-line accesss using a Uniform Resource Locator address or similar addressing scheme such as <a href="http://www.statkart.no/isotc211">http://www.statkart.no/isotc211</a>	M	1	Class	URL

119	401	description	detailed text description of what the online resource is /does	O	1	CharacterString	Free text
-----	-----	-------------	--	---	---	-----------------	-----------

### G.B.3.2.6 Telephone information

No.	ISO No.	Name / Role name	Definition	Obligation / Condition	Maximum occurrence	Data type	Domain
120	407	CI_Telephone	telephone numbers for contacting the responsible individual or organization	Use obligation/condition from referencing object	Use maximum occurrence from referencing object	Class <<Data Type>>	
121	408	voice	telephone number by which individuals can speak to the responsible organization or individual	O	N	CharacterString	Free text
122	409	facsimile	telephone number of a facsimile machine for the responsible organization or individual	O	N	CharacterString	Free text

## **G.B.4 Externally referenced entities**

### **G.B.4.1 Introduction**

There are several entities referenced by this International Standard that are documented by other external standards. Those externally referenced entities are explained below.

### **G.B.4.2 Date**

Date: gives values for year, month and day. Character encoding of a date is a string which shall follow the format for date specified by ISO 8601. This class is documented in full in ISO/TS 19103.

### **G.B.4.3 Distance, angle and UomLength information**

Distance: This class is documented in full in ISO/TS 19103.

Angle: Amount of rotation need to bring one line or plane into coincidence with another, generally measured in radians or degrees. This class is documented in full in ISO/TS 19103.

UomLength: any of the measuring systems to measure the length, distance between two entities. This class is documented in full in ISO/TS 19103.

### **G.B.4.4 Temporal primitive information**

TM\_Primitive: an abstract class representing a non-decomposed element of geometry or topology. This class is fully documented in ISO 19108.

### **G.B.4.5 Vertical datum information**

SC\_VerticalDatum: set of parameters describing the relation of gravity-related heights to the Earth. This class is fully documented in ISO 19111

## G.B.5 CodeLists and enumerations

### CI\_DateTypeCode<<CodeList>>

	Name	Domain code	Definition
1	CI_DateTypeCode	DateTypCd	identification of when a given event occurred
2	creation	001	date identifies when the resource was brought into existence
3	publication	002	date identifies when the resource was issued
4	revision	003	date identifies when the resource was examined or re-examined and improved or amended

### CI\_RoleCode<<CodeList>>

	Name	Domain code	Definition
1	CI_RoleCode	RoleCd	function performed by the responsible party
2	resourceProvider	001	party that supplies the resource
3	custodian	002	party that accepts accountability and responsibility for the data and ensures appropriate care and maintenance of the resource
4	owner	003	party that owns resource
5	user	004	party who uses the resource
6	distributor	005	party who distributes the resource
7	originator	006	party who created the resource
8	pointOfContact	007	party who can be contacted for acquiring knowledge about or acquisition of the resource
9	principalInvestigator	008	key party responsible for gathering information and conducting research
10	processor	009	party who has processed the data in a manner such that the resource has been modified
11	publisher	010	party who published the resource
12	author	011	party who authored the resource

### MD\_CharacterSetCode<<CodeList>>

	Name	Domain code	Definition
1	MD_CharacterSetCode	CharSetCd	name of the character coding standard used for the resource
2	utf8	004	8-bit variable size UCS Transfer Format, based on ISO/IEC 10646

## MD\_MaintenanceFrequencyCode&lt;&lt;CodeList&gt;&gt;

	Name	Domain code	Definition
1	MD_MaintenanceFrequencyCode	MaintFreqCd	frequency with which modifications and deletions are made to the data after it is first produced
2	annually	008	data is updated every year
3	asNeeded	009	data is updated as deemed necessary
4	irregular	010	data is updated in intervals that are uneven in duration
5	notPlanned	011	there are no plans to update the data
6	unknown	012	frequency of maintenance for the data is not known

## MD\_MediumNameCode&lt;&lt;CodeList&gt;&gt;

	Name	Domain code	Definition
1	MD_MediumNameCode	MedNameCd	name of the medium
2	cdRom	001	read-only optical disk
3	dvd	002	digital versatile disk
4	dvdRom	003	digital versatile disk, read only

## MD\_RestrictionCode&lt;&lt;CodeList&gt;&gt;

	Name	Domain code	Definition
1	MD_RestrictionCode	RestrictCd	limitaion(s) placed upon the access or use of the data
2	copyright	001	exclusive right to the publication, production, or sale of the rights to a literary, dramatic, musical, or artistic work, or to the use of a commercial print or label, granted by law for a specified period of time to an author, composer, artist, distributor
3	patent	002	government has granted exclusive right to make, sell, use or license an invention or discovery
4	patentPending	003	produced or sold information awaiting a patent
5	trademark	004	a name, symbol, or other device identifying a product, officially registered and legally restricted to the use of the owner or manufacturer
6	license	005	formal permission to do something
7	intellectualPropertyRights	006	rights to financial benefit from and control of distribution of non-tangible property that is a result of creativity
8	restricted	007	withheld from general circulation or disclosure
9	otherRestrictions	008	limitation not listed

## MD\_ScopeCode&lt;&lt;CodeList&gt;&gt;

	Name	Domain code	Definition
1	MD_ScopeCode	ScopeCd	class of information to which the referencing entity applies
6	dataset	005	information applies to the dataset

## MD\_SpatialRepresentationTypeCode&lt;&lt;CodeList&gt;&gt;

	Name	Domain code	Definition
1	MD_SpatialRepresentationTypeCode	SpaRepTypCd	method used to represent geographic information in the dataset
2	vector	001	vector data is used to represent geographic data
3	grid	002	grid data is used to represent geographic data

## MD\_TopicCategoryCode&lt;&lt;Enumeration&gt;&gt;

	Name	Domain code	Definition
1	MD_TopicCategoryCode	TopicCatCd	high-level geographic data thematic classification to assist in the grouping and search of available geographic data sets. Can be used to group keywords as well. Listed examples are not exhaustive. NOTE It is understood there are overlaps between general categories and the user is encouraged to select the one most appropriate.
2	farming	001	rearing of animals and/or cultivation of plants Examples: agriculture, irrigation, aquaculture, plantations, herding, pests and diseases affecting crops and livestock
3	biota	002	flora and/or fauna in natural environment Examples: wildlife, vegetation, biological sciences, ecology, wilderness, sealife, wetlands, habitat
4	boundaries	003	legal land descriptions Examples: political and administrative boundaries
5	climatologyMeteorologyAtmosphere	004	processed and phenomena of the atmosphere Examples: cloud cover, weather, climate, atmospheric conditions, climate change, precipitation
6	economy	005	economic activities, conditions and employment Examples: production, labour, revenue, commerce, industry, tourism and ecotourism, forestry, fisheries, commercial or subsistence hunting, exploration and exploitation of resources such as minerals, oil and gas

7	elevation	006	height above or below sea level Examples: altitude, bathymetry, digital elevation models, derived products
8	environment	007	environmental resources, protection and conservation Examples: environmental pollution, waste storage and treatment, environmental impact assessment, monitoring environmental risk, nature reserves, landscape
9	geoscientificInformation	008	information pertaining to earth sciences Examples: geophysical features and processes, geology, minerals, sciences dealing with the composition, structure and origin of the earth's rocks, risks, risks of earthquakes, volcanic activity, landslides, gravity information, soils, permafrost, hydrogeology, erosion
10	health	009	health, health services, human ecology, and safety Examples: disease and illness, factors affecting health, hygiene, substance abuse, mental and physical health, health services
11	imageryBaseMapsEarthCover	010	base maps Examples: land cover, topographic maps, imagery, unclassified images, annotations
12	intelligenceMilitary	011	military bases, structures, activities Examples: barracks, training grounds, military transportation, information collection
13	inlandWaters	012	inland water features, drainage systems and their characteristics Examples: rivers and glaciers, salt lakes, water utilization plans, dams, currents, floods, water quality, hydrographic charts
14	location	013	positional information and services Examples: addresses, geodetic networks, control points, postal zones and services, place names
15	oceans	014	features and characteristics of salt water bodies (excluding inland waters) Examples: tides, tidal waves, coastal information, reefs
16	planningCadastre	015	information used for appropriate actions for future use of the land Examples: land use maps, zoning maps, cadastral surveys, land ownership
17	society	016	characteristics of society and cultures Examples: settlements, anthropology, archaeology, education, traditional beliefs, manners and customs, demographic data, recreational areas and activities,

			social impact assessments, crime and justice, census information
18	structure	017	man-made construction Examples: buildings, museums, churches, factories, housing, monuments, shops, towers
19	transportation	018	means and aids for conveying persons and/or goods Examples: roads, airports/airstrips, shipping routes, tunnels, nautical charts, vehicle or vessel location, aeronautical charts, railways
20	utilitiesCommunication	019	energy, water and waste systems and communications infrastructure and services Examples: hydroelectricity, geothermal, solar and nuclear sources of energy, water purification and distribution, sewage collection and disposal, electricity and gas distribution, data communication, telecommunication, radio, communication networks

## Annex G.C (informative)

### Dataset metadata – XML Schema

The XML schema for Global Map Metadata Profile is created based on ISO 19139 (which defines the XML Schema implementation of ISO19115).

```
<!--
*****
Global Map Metadata Profile XML Schema implementation

## APPENDIX H GML Documents

The following are GML schemas for Global Map data (Global Map GML profile) and sample GML instances. These schemas specify the structure and contents of each feature class of Global Map vector data. Each feature data must be prepared in accordance with the corresponding schema.

### GML Schema - Airport (point data)

```
<schema xmlns="http://www.w3.org/2001/XMLSchema" xmlns:gml="http://www.opengis.net/gml/3.2"
